Career Summary

- Associate Consultant with 15+ years of experience in developing and designing solutions across Insurance, Healthcare, Oil & Gas domains
- Experienced .NET developer with command of software engineering practices including SDLC, version control, release management, project support and agile delivery, enabling both technical leadership and hands-on implementation.
- Scratch developer and end-to-end owner of the ORC application since inception, managing requirements, design, development, code reviews, and major deployments while enhancing code quality through comprehensive unit testing.
- Subject Matter Expert (SME) with 3+ years of experience supporting Go Technology/Hub2 SaaS platform, successfully leading regional migrations (Qatar, Brunei, Bonga), archival and managing divestment processes.
- Recently transitioned to L3 support role for newly onboarded OPEX SaaS platform, actively participating in training and building expertise for advanced troubleshooting and proactive support.
- Provided production support for applications, including incident triage, root cause analysis, and resolution coordination.
- Demonstrated proficiency in modern cloud platforms and data engineering tools including Azure DevOps, Azure Boards for project management and CI/CD pipelines, Databricks and Data Factory for data analytics and processing, and IAM (Identity & Access Management) for secure access and authentication.
- Demonstrated strong security expertise by resolving vulnerabilities at both Azure and application levels, significantly strengthening the application.
- Built and maintained process documentation, knowledge repositories (SharePoint, Encyclopedia pages), training videos, and conducted user workshops, enabling organization-wide adoption and self-service access to governed data platforms.
- Designed and implemented multiple ServiceNow tool catalogues across three projects (ORC, Hub2, Lucid chart/WEFS) for user onboarding/offboarding and project lifecycle management, all now live and actively used.
- Created and managed training materials including module-specific videos (DDP, SOF, SURU, Assurance) and conducted multiple user engagement sessions, drop-in workshops, and demo presentations to facilitate adoption.
- Active mentor to junior team members in both technical and functional domains, while staying current with industry trends. Collaborated with multiple teams across various regions to share best practices and ensure timely delivery.

Education

- Master of Computer Applications (MCA), 2008

Achievements and Awards

- Received “**VP-CIO**” award from client Shell
- Received “**Bronze award**” from CGI for exceptional contributions at client place
- Received “**Pat on Back**” award from CGI for excellent work and mentoring team members
- Received “**Partnership First**” award from DXC Technology for project Release Activities

Employment History

Company	Designation	From	To	Duration
CGI Information Systems Pvt Ltd	Associate. Consultant	January 2020	Till Date	5.6 years
DXC Technology (Formerly HPE)	Senior Software Engineer	February 2016	January 2020	4 years
CGI Information Systems Pvt Ltd	Software Engineer	July 2010	January 2016	5.5 years

Technical Skills

Programming Languages	.Net core, C#.Net, ASP.Net, VB.Net, ADO.net, LINQ, MVC Architecture, Typescript, JavaScript. Angular, jQuery, KendoUI, Telerik controls, HTML
Cloud & Data Engineering	Microsoft Azure, Data Analytics, Data Archival, Data Decommissioning, Data extraction & transformation, Data Governance, Data Integration.
Databases	Oracle, SQL Server, Postgres DB, MYSQL
Practices	SDLC, Agile, Scrum, Subject Matter Expert, Stakeholder Management, Vendor Management
Tools	ServiceNow, Jira, Kanban, Version Management, Git. CI/CD pipelines, Power BI.

SUMMARY OF PROJECTS

ORC, Client: SHELL - Dec 2021 to Till Date

- ❖ Serving as the technical lead for ORC (OR & CSU Tool)—a strategic enterprise platform unifying disparate operational tools across organizational units.
- ❖ As the original scratch developer since inception, I own end-to-end accountability across all project phases including requirement gathering, solution design, development, code reviews, and major deployments.
- ❖ ORC aggregates critical modules (DDP, SOF, SURU, P2A, Assurance, eSOF) while enabling centralized change management and enterprise-wide information cascading.

Technical Stack:

- ASP.NET MVC, Entity Framework, C#, SQL Server, Azure, Bootstrap, jQuery, HTML, Azure DevOps, and Git/GitHub

Key Responsibilities:

- Contributed as Technical Lead across all ORC development phases for proactive contributions and effective execution
- Architected and built ORC web application from scratch using modern technologies, with emphasis on performance optimization and long-term scalability
- End-to-end DDP Module development and deployment, establishing architectural patterns for subsequent modules
- Provided continuous support for SAAS Applications Gotechnology/Hub2, OPEX Estimation and Lucid Chart/WEFS, besides contributing to ORC project activities.
- Created and curated module-wise training videos (DDP, SOF, SURU, Assurance) aligned with Shell standards, established ORC SharePoint repository for seamless user onboarding
- Designed and deployed ServiceNow tool catalogs for user onboarding/offboarding and project lifecycle management, now live and actively utilized by stakeholders
- Managed application maintenance including system cleanup, unused project/account removal, and continuous optimization for efficiency and security
- Provided L3 production support across ORC and SAAS applications, including incident triage, root cause analysis, and resolution coordination, ensuring high availability and minimal business disruption
- Conducted product demos for ORC version 5.1; hosted quarterly drop-in sessions for user feedback collection and agile enhancement implementation, fostering user-centric development approach
- Implemented comprehensive unit test frameworks enhancing code quality and coverage; resolved vulnerabilities (including critical issues) at both Azure and application levels, significantly strengthening security
- Led requirements gathering, client stakeholder management, and full-stack development with testing and deployment
- Evaluated enterprise tools and consolidated requirements to define technical roadmap and implementation strategy

GoTechnology Hub2, Client: SHELL - Dec 2021 to Till Date

- ❖ Serving as the foundational Subject Matter Expert (SME) for Go Technology / Hub 2 project.
- ❖ GoTechnology Hub 2 is a configurable, web-based Completions Management System (CMS) designed to streamline and control Construction, Commissioning, Decommissioning and Divestment workflows. It provides real-time visualization and reporting across all project users and is complemented by mobile applications that support full offline functionality.
- ❖ Hub 2 enables teams to efficiently track, progress, and report on Tags, ITRs, Punch Lists, Procedures, MOCs, Handovers, and Preservation activities from a single, unified web portal.

Technical Stack:

- Subject Matter Expert, SQL server, Azure, AWS, Data Archival. Asset, Vendor, Project and Stakeholder Management

Key Responsibilities:

- Served as the primary Subject Matter Expert (SME) for the GoTechnology Hub2 SaaS platform, leading vendor management and collaborating with 18+ assets, comprising of around 2,500+ project users across multiple regions.
- Led end-to-end handling of project onboarding/offboarding, project user lifecycle management, governing shell process standards, data migration, data archival, asset divestment and stale asset retirement processes for the Hub2 SaaS platform across multiple regions and assets.
- Enforced standardized ServiceNow catalog workflows for all operational requests, covering user onboarding and offboarding, data migration, data archival, divestment, and overall project lifecycle management.
- Worked closely with the vendor team based on the project user's ServiceNow requests, driving timely completion.
- Ensured data archival and system lifecycle processes aligned with data integrity principles, data retention policies,

organizational standard operating procedures (SOPs) and security standards. Designed and implemented an end-to-end data archival process and automated tool for Hub2, enabling compliant retirement of stale assets, large dataset migration to Azure Blob Storage, and lifecycle closure documentation, achieving reduction in manual effort.

- Maintained process documentation and system lifecycle controls aligned with data integrity and regulatory audit requirements, always ensuring inspection readiness.
- Prepared comprehensive process documentation for project onboarding and offboarding activities
- Developed detailed process flowcharts, updated knowledge repositories (Encyclopaedia pages, SharePoint resources), and published monthly user statistics reports to senior management with insights on usage trends and performance. Also developed an automated tool for generating these statistics and shared reports widely for internal Shell use.
- Planned and executed monthly Hub2 drop-in sessions across multiple regions, sharing vendor releases, feature enhancements, and best practices with a broad user community.
- Facilitated SyncUP calls with vendors and project users, to discuss business requirements and project roadmaps.
- Created and managed a dedicated Viva Engage (Yammer) community for Hub2, publishing regular announcements, updates, and user communications.
- Continuously enhanced the Hub2 Wikipedia page with up-to-date content, reference links, and video tutorials to enable user self-service and faster onboarding.
- Engaged in market scan discussions with alternate vendors to assess capabilities, support strategic decision-making, and establish a fallback vendor strategy.
- Built and sustained strong relationships with business stakeholders, delivering timely support and fostering trust through consistent, high-quality engagement.
- Supporting SaaS applications (OPEX Estimation, Lucid Chart/WEFS) in addition to core contributions to the Subject Matter Expert role to GoTechnology Hub2 projects.

PROACT, Client: SHELL – Feb 2020 to Nov 2021

- ❖ ProAct is an interactive project and portfolio performance visualization platform that integrates multiple data sources to generate impactful dashboards.
- ❖ The solution provides real-time project health insights through interactive webforms that enable teams to track disciplinary progress, identify plan-to-actual variances, and monitor forecast accuracy throughout the project lifecycle, seamlessly integrated with Power BI analytics.

Technical Stack:

- ASP.NET MVC, Entity Framework, C#, SQL Server, Azure, Bootstrap, jQuery, CSS, and HTML

Key Responsibilities:

- Managed full-stack development lifecycle including requirements gathering, client interaction, frontend/backend development, testing, and production deployment
- Led development of ProAct Portfolio Module and executed EMoc data integration
- Designed and implemented UI components with responsive design and priority-based incident management
- Served as individual contributor and lead developer, driving technical delivery and team collaboration

HLS, DXC Technology - Feb 2016 to Jan 2020

- ❖ Health and Life Science (HLS) is a next-generation pharma payer platform designed to consolidate the pharma portfolio with unified technical architecture and user experience.
- ❖ The solution supports web and mobile interfaces across critical modules including Provider Management, Provider Portal, Prior Authorization, and Managed Care operations.
- ❖ The solution supports complete patient pathway management—from referral through treatment, discharge, and community follow-up—across Acute Hospitals, Community Hospitals, GP Practices, and Polyclinics.

Technical Stack:

- Visual Studio 2017, Entity Framework 6, Web API, MVC 5, JavaScript, jQuery, Kendo UI, WCF, LINQ, SSRS Reports.

Key Responsibilities:

- Conducted requirements analysis and delivered full-stack development with unit testing and documentation
- Participated in agile backlog grooming and sprint planning to ensure efficient delivery cycles
- Served as Technical Owner, Technical Architect, and Senior Developer, driving architectural decisions.
- Led Computer System Validation (CSV) activities ensuring compliance and regulatory standards, covering end-to-end lifecycle from requirements to validation and release.

- Managed incident resolution across all severity levels (Low, Medium, High) with proactive remediation
- Contributed to daily scrum ceremonies and cross-functional team collaboration

eCareLogic, CGI Information Systems Pvt Ltd - May 2014 to Jan 2016

- ❖ eCareLogic is a modular Electronic Patient Record (EPR) platform built to integrate legacy hospital data and enable scalable, incremental implementation.
- ❖ The solution supports complete patient pathway management—from referral through treatment, discharge, and community follow-up—across Acute Hospitals, Community Hospitals, GP Practices, and Polyclinics.

Technical Stack:

- Visual Studio 2013, .NET Framework 4.5.1, ASP.NET, VB.NET, WCF, JavaScript, jQuery, SQL Server 2008, and TFS

Key Responsibilities:

- Conducted requirements analysis and delivered full-stack development with unit testing and documentation
- Developed Elicitation, Low-Level Design (LLD), and Unit Test Specifications (UTS) documentation
- Served as Senior Developer and Solution Designer, ensuring architectural consistency and quality standards
- Developed critical modules including Web Letters and Core Pathways, implementing diverse clinical use cases
- Managed incident resolution across all severity levels (Low, Medium, High) with proactive issue remediation

RATABASE, CGI Information Systems Pvt Ltd - June 2012 to April 2014

- ❖ Ratabase Product Builder is a Windows-based application designed for creating, modifying, and managing insurance rates and business rules before production deployment.
- ❖ The intuitive graphical interface enables users to develop and test rating data, manage rate tables and formulas, generate reports, and execute test rating scenarios—all electronically, eliminating manual processes.

Technical Stack:

- Visual Studio .NET 2010, .NET Framework 3.5, C#.NET, XSLT, WPF, Subversion Control, and CAB Framework

Key Responsibilities:

- Analyzed client requirements and delivered complete solution design with unit testing and documentation
- Prepared detailed HLD and LLD specifications aligned with business needs
- Managed incident resolution across all severity levels (Low, Medium, High) with efficient bug remediation
- Spearheaded Ratabase 7.0 release implementation, delivering and integrating new product enhancements

EDGE, CGI Information Systems Pvt Ltd - July 2010 to June 2012

- ❖ DXC EDGE is an insurance management platform supporting the complete policy lifecycle—from quoting and underwriting to claims administration, billing, and regulatory reporting. Built on a highly configurable rules engine, it serves diverse insurance carriers with flexible solutions.
- ❖ The intuitive graphical interface enables users to develop and test rating data, manage rate tables and formulas, generate reports, and execute test rating scenarios—all electronically, eliminating manual processes.
- ❖ The platform features a .NET-based API enabling seamless integration with agency management systems, proprietary interfaces, and legacy applications, including data conversion capabilities.

Technical Stack:

- Visual Studio .NET, .NET Framework 3.5, C#.NET, VB.NET, WPF, TFS, MVPC Architecture, SQL Server and Oracle

Key Responsibilities:

- Gathered requirements, conducted technical analysis, and performed full-stack development with unit testing
- Served as developer, designer, and code reviewer, ensuring quality and architectural consistency
- Assisted in preparing technical documentation, including user guides and release notes, to support smooth handover and knowledge transfer.
- Supported the QA team in functional testing and defect verification, helping stable and high-quality releases.
- Managed incident resolution across all severity levels (Low, Medium, High) with efficient bug remediation
